CC DNAZYME (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA with a YGY moutif). The CD20-targetting nucleic acid is used to cleave RNA cf CC CD in the presence of a divalent cation that is preferably MG 2+.

CC FCD20. The treatment may further compition associated with the level cf CD20. The treatment may further compities the use of one or more creat lymphoma, leukaemia, B-c21 lymphoma, low-grade or follicular non-therapies. In particular, he CD20 targetting nucleic acid may be used to treat lymphoma (MCL), immunocytoma (MNC), small B-c21 lymphocytic lymphocytic lymphoma, immunocytoma (MCL), small B-c21 lymphocytic lymphocytic lymphocytopaenia, and inflammatory arthropathy. The MCGO activity of the crasence of a divalent cation that a preferably MG 2+. Purthermore, the nucleic acid may be contacted with a cell to reduce NOGO activity of the contacted with a cell to reduce MCGO activity of the nucleic acid may farther compathy, and celebrovascular accident (CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS), chemotherapy-induced neuropathy, and/or oth chemotherapy-induced neuropathy; amyotrophic lateral sclerosis; ALS; Parkinson's disease; ataxia; Huntington's disease; substrate sequence; Creutzfeldt-Jakob disease; muscular dystrophy; neurodegenerative disease. Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense constructs, which down regulate expression of a CD20 gene or neurite growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and disease, muscular dystrophy, and/or other neurodegenerative disease states which respond to the modulation of NOGO expression. The presensequence is a substrate sequence for a nucleic acid of the invention based on the human CD20 sequence Chowrira BM; Claim 31; Page 152; 200pp; English. central nervous system injury. 11-FEB-2000; 2000US-0181797P. 28-FEB-2000; 2000US-0185516P. 06-MAR-2000; 2000US-0187128P. 09-FEB-2001; 2001WO-US004273 RIBOZYME PHARM INC. The invention relates to enzymatic nucleic acid molecules that down regulate expression of chloride channel calcium activated 1 (CLCA1) genes by cleaving RNA derived from the genes. The nucleic acid sequences are useful as pharmaceutical agents for treating conditions such as chronic obstructive pulmonary disease (COPD), chronic bronchitis, asthma, cystic libroals, obstructive bowel syndrome and any other diseases or conditions that are related to or will respond to the levels of CLCA1 in a cell or tissue. The sequences are useful for reducing CLCA1 activity in a cell, hence, are useful for treatment of a patient having a condition associated with the level of CLCA1, where the invention further comprises the use of one or more therapies under conditions suitable for the treatment, for example, oxygen therapy, bronchodilators, corticosteroids, archibererials, vaccinations, acetylcysterine and mucokinetic agents. The nucleic acids of the invention are also used as diagnostic tools to examine genetic drift and mutations within diseased cells or to detect the presence of cLCA1 in a cell. The invention relates to enzymatic nucleic acid molecules that down regulate expression of chloride channel calcium activated 1 (CLCA1) genes by cleaving RNA derived from the genes. The nucleic acid sequences are useful as pharmaceutical agents for treating conditions such as chronic obstructive pulmonary disease (COPD), chronic bronchitis, asthma, cystic fibrosis, obstructive bowel syndrome and any other diseases or conditions that are related to or will respond to the levels of CLCA1 in a cell or tissue. The sequences are useful for reducing CLCA1 activity in a cell, hence, are useful for treatment of a patient having a condition associated with the level of CLCA1, where the invention further comprises the use of one or more therapies under conditions suitable for the treatment, for example, oxygen therapy, bronchodilators, corticosteroids, antibacterials, vaccinations, acetylcysteine and mucokinetic agents. The nucleic acids of the invention are also used as diagnostic tools to examine genetic drift and mutations within diseased cells or to detect the presence of CLCA1 RNA in a cell. This sequence represents an

The invention relates to enzymatic nucleic acid molecules that down regulate expression of chloride channel calcium activated 1 (CLCA1) genes by cleaving RNA derived from the genes. The nucleic acid sequences are useful as pharmaceutical agents for treating conditions such as chronic obstructive pulmonary disease (COPD), chronic bronchitis, asthma, cystic fibrosis, obstructive bowel syndrome and any other diseases or conditions that are related to or will respond to the levels of CLCA1 in a cell or tissue. The sequences are useful for reducing CLCA1 activity in a cell, hence, are useful for treatment of a patient having a condition case useful for treatment of CLCA1 activity in a cell, hence, are useful for treatment of a condition a condition to more therapies under conditions suitable for the treatment, for example, oxygen therapy, bronchodilators, corticosteroids, antibacterials, vaccinations, acetyloysteine and mucokinetic agents. The nucleic acids of the invention are also used as diagnostic tools to examine genetic drift and mutations within diseased cells or to detect the presence of CLCA1 RNA in a cell. This sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense constructs, which down regulate expression of a CD20 gene or neurite growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and central nervous system injury.

Claim 89; Page 92; 200pp; English.

The invention relates to a nucleic acid molecule which down regulates expression of a CD20 gene and a nucleic acid molecule which down regulates expression of a neutite growth inhibitor gene (NGGO). The regulates expression of a neutite growth inhibitor gene (NGGO). The nucleic acids may be enzymatic nucleic acid cleaving an RNA molecule DNAzyme) an Inozyme (an endolytic nucleic acid cleaving an RNA molecule possessing an NCH motif), a G-cleaver (cleaving RNA with a NNN motif), a zinzyme (cleaving RNA with an NNN motif), a zinzyme (cleaving RNA with a YOY motif). The CD20-targetting nucleic acid is used to cleave RNA of CD20 in the presence of a divalent cation that is preferably Mg^2+. Furthermore, it may be contacted with a cell to reduce CD20 activity of the cell and treat a patient having a condition associated with the level of CD20. The treatment may further comprise the use of one or more chargeting incleic acid may be used to treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular non-Hodgkin's lymphoma inmunodeficiency virus) associated NHL, lymphoma, leukaemia, HIV (human immunodeficiency virus) associated NHL, lymphoma, clenkaemia, HIV (human immunodeficiency virus) associated NHL, lymphoma, clenkaemia, HIV (human immunodeficiency virus) associated NHL, lymphoma, clenkaemia, and inflammatory arthropathy. The NOGO gene in the presence of a divalent cation that is preferably Mg^2+. Furthermore, the cucleic acid may be contacted with a cell to reduce NOGO activity of the nucleic acid may be contacted with a cell to reduce NOGO activity of the cucleic acid may be the NOGO-targetting nucleic acid may be used to treat a patient having a condition associated with the level of NOGO-trargetting nucleic acid may be contacted with a cell to reduce NOGO activity of the cucleic acid may be the NOGO-targetting nucleic acid may be contacted with a cell to reduce NOGO activity of the nucleic acid may be the NOGO-targetting nucleic acid may be one or more corrected with NOGO-targetting nucleic acid may be

```
The invention relates to a nucleic acid molecule which down regulates expression of a cD20 gene and a nucleic acid molecule which down control of a cD20 gene and a nucleic acid molecule which down cregulates expression of a neurite growth inhibitor gene (NOGO). The nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a nucleic acids may be enzymatic nucleic acid cleaving RNA with a NVB moitl), a G-cleaver (cleaving RNA with a NVB moitl), a cleaver (cleaving RNA with a YGY moitl). The CD20-targetting nucleic acid is used to cleaver RNA of CD20 in the presence of a divalent cation that is preferably Mg^2+.

The coll and treat a patient having a condition associated with the level cor CCC treat lymphom a luckaemia, the CD20 targetting nucleic acid may be used to the call and treat a patient having a condition associated with the level cor CCC treat lymphom a luckaemia, becall lymphoma, luckaemia, and inflammatory arthrogathy. The NOGO targetting nucleic acid is used to cleave RNA of the NOGO gene in the cucleic acid may be contacted with a cell lymphomy. The NOGO created with a cell and treat a patient having a condition associated with the level of concern and inflammatory arthrogathy. The NOGO created with a cell to reduce NOGO activity of the nucleic acid may be contacted with a cell to reduce NOGO activity of the cucleic acid may be contacted with a cell to reduce NOGO activity of the cucleic acid may be contacted with a cell to reduce on a nore control of a disease, disease, muscular accident (CNGO, the treatment may further comprise the use of cone or more theraptes. In particular, the NOGO-targetting nucleic acid may be contacted with a cell to reduce NOGO activity of the cuch central nervous system (NNS) injury and creatal sclerosis (MS). Chemotherapy-induced neuropathy, and/cor other neurodegeneral in which respond to the modulation of NOGO expression. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
